Considerated ORF (Open reading frame) 1-4534, and sequences ABRY5054ABRY79587 represent cDNAs encoding them. The invention also encompasses
Considerated ORF (Open reading frame) 1-4534, and sequences ABRY5054ABRY79587 represent cDNAs encoding them. The invention also encompasses
Considerated to as ORFX) proteins, Oplymucleotides at least 85% identical to
referred to as ORFX) proteins, Dolymucleotides at least 85% identical to
considerate acid sequences, vectors and host cells comprising ORFX
polymucleotides, the recombinant production of ORFX proteins, antibodies
Consideration of ORFX proteins, methods of screening for modulators of ORFX expression or
activity, and methods of screening individuals for a predisposition to an
ORFX-associated disorder. The ORFX proteins of the invention have a wide
consideration and antibodies as cytotive, thrombolytic activity,
cold differentiation, immune modulation, haematopolesis regulation,
cold differentiation, immune modulation, haematopolesis regulation,
cold differentiation, immune modulation, haematopolesis regulation,
cold differentiation, disorders activity, thrombolytic activity,
cold antiinfective activity, and may also be involved in the determination
colf bodily reharcateristics, fertility and behaviour. ORFX proteins,
conclet acids and antibodies may be used in the treatment of cancers,
conclet acids and antibodies may be used in the treatment of cancers,
conclet proliferation, disorders such as epilepsy and Alaheimer's disease,
conterpoliferation, disorders such as epilepsy and Alaheimer's
content proliferation, disorders such as epilepsy and Alaheimer's
content of primars and probes, in the detection of ORFX genomic sequences
contranscripts, in the identification and cloning of homologous
contranscripts, in the identification and cloning of homologous
contents, in genetate mellitue, hypothyroidism, and cholesteric disapposit, and inference and infections and inference acids may also be useful in the
content of primary and indentification and content and and cardiovascular disease; immune system disorder; organ transplantation; tissue growth disorder; tissue regeneration disorder; diabetes mellitus; hypothyroidism; cholesterol ester storage disease; infection; vulnerary; vasotropic; antipsoriatic; antidabetic; cytostatic; nootropic; neuroprotective; antiatheroselerotic; anticoagulant; thrombolytic; cardiant; hypotensive; antithyroid; antiinflammatory; immunomodulator; dermatological; analgesic; virucide; antibacterial; fungicide. Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and disorders related to organ Sequences ABP31028-ABP35561 represent 4534 novel human proteins Claim 10; Page 1545; 2508pp; English. 24-MAY-2001; 2001WO-US017076. 24-MAY-2000; 2000US-0206690P.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                               Human; brain expressed exon; gene expression analysis; probe; microarray;

The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements) fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABG47344-ABG5930 represent human liver single exon encoded peptides of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human adult liver.

The invention also relates to vectors and recombinant host cells comprising a nuclectide of the invention, methods of including the nucleotides of the invention, methods of identifying compounds which car polypeptides in a sample, and methods of identifying compounds which polypeptides of the invention have homology to known proteins, thereby collypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence of giving an insight into their probable biological activities, and hence of giving an insight into their probable biological activities, and hence of giving an insight into their probable biological activities, or coll proliferation or cell manuomodulatory activities, including cytokine, cell proliferation or cell manuomodulatory activities, including cytokine, cell proliferation or cell manuomodulatory activities; passemblased activities; themological activities; benefits or may be benefit on oncogenesis, cancer cell proliferation or metastasis.

Computions, e.g., by prorein or gene therapy such conditions include cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell disorders), chromodulatory activities includes (e.g., asthma or arthritis), proliferative retinopathy, atheroselerosis, coronary heart disease, arterinopathy, atheroselerosis, coronary conversement, bolypeptides involved with tisue regeneration and creating encoders (e.g., myeloid or lymphoid cell creating encoders (e.g., asthma or arthritis), proliferative retinopathy, atheroselerosis, coronary coronary activities may be used in the treatment of viral, activities may be used in the treatment of viral, ceptace cell growth. For example, such polypeptides may be used in the treatment of viral, corrected that growth. For example, such polypeptides may be used to neuroeping them and in the diagnosis of the above conditions 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis
atherosclerosis; coronary heart disease, arterial ischaemia; bone disorder; osteoporosis; vascular growth disorder; tissue regeneration; wound healing; infection; immune disorder; cell culture; drug screening; gene therapy; antinflammatory; antiathmatic; haemostatic; antiathritic; haemostatic; antiatricriscipleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscleroscle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               screening techniques. The present sequence represents a novel human polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 20; Page 238; 1963pp; English.

for processome analysis. Disorders that can be treated include cell proliferative disorders, e.g., arteriosclerosis and cancer, neurological disorders, e.g., Huntington's disease and Parkinson's disease, cardiovascular disorders, e.g., atherosclerosis and cancer, neurological failure, gastrointestinal disorders, e.g., gastritis and nausea, autointestinal disorders, e.g., gastritis and nausea, subjure, gastrointestinal disorders, e.g., acquired immunodeficiency syndrome (ALDS) and anaemia, metabolic disorders, e.g., diabetes and obesity and viral infections. Nucleic acids that encode GCREC are used to for identifying agents that alter its expression, for assessing toxicity of test compounds, and as sources of primers and probes for diagnostic. detection of GCREC DNA and of therapeutic antisense and ribozyme sequences. They can also be used in gene therapy, for chromosomal sequences. They can also be used in gene therapy, for chromosomal useful for diagnosis and monitoring of diseases associated with GCREC expression, for detecting and purifying GCREC, and as therapeutic agents
modulators. They can also be used for generating specific antibodies and

New polynucleotides which encode polypeptides involved in olfactory sensation for identifying olfactory agonists and antagonists.

Example 6; Page 1464-1465; 1857pp; English.

The present sequence is an olfactory receptor which is encoded by one of a number of novel polynucleotides. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining differences in the olfactory faculties of different individuals

The present sequence is a polypeptide encoded by one of 344 newly mined human genes. It was used as a query sequence in a database search of olfactory receptor (OR)-11ke sequences. The invention relates to isolated polynucleotides encoding polypeptides involved in olfactory sensation. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed corpus (II) as useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a cupylepptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forgenetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in

The invention relates to an isolated nucleic acid derived from Enterococcus faecium encoding an Enterococcus faecium polypeptide having one of 10 fully defined sequences given in the (or comprising 40 sequential nucleotides chosen from any of the nucleic acids, its complement or sequences hybridising to it). Also included are a recombinant vector comprising the nucleic acid operably linked to transcription regulatory element, a cell comprising the vector and a recombinant vector comprising the nucleic acid operably linked to transcription regulatory element, a cell comprising the vector and a reposen from 3654 disclosed sequences encoding 3654 disclosed proteins. The nucleic acids is useful for disgnosing pathological conditions. The nucleic acids is useful for disgnosing pathological conditions cellifection, bacteraemia, endocarditis, wounds and abdominal-pelvic infection) and for screening drugs such as agonists and antagonists. The nucleic acid is useful for recombinant production of Candida albicans and vaccines containing the nucleic acid are useful for preventing or treating Enterococcus faccine infections. The present sequence represents

The invention relates to a novel G-protein-coupled receptor up-regulated in prostate cancer, termed PHOR-1. The encoding cDNA is contained in plasmid designated plothsAll deposited with ATCC as Accession No.PTA-312. PHOR-1 polypeptides and polymucleotides are useful for diagnosing the presence of cancer, especially prostate, kidney, uterine, cervical, stomach or rectal cancer by determining and comparing the level of the protein or mRNA expression in test and normal tissue samples. Pharmaceutical compositions comprising PHOR-1 is useful for treating cancer. PHOR-1 proteins are useful for identifying ligands and other agents and cellular constituents that binds to PHOR-1 gene product and for generating antibodies which are useful in diagnostic, prognostic and imaging methodologies and for the treatment of prostate cancer. Cell lines expressing PHOR-1 are useful for identifying protein-protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      interactions mediated by PHOR-1. The present sequence represents the amino acid sequence of AI138218, a PHOR-1 family member

maintenance molecule proteins given in ABR43240 to ABR43270, designated maintenance molecule proteins given in ABR43240 to ABR43270, designated PMMM-31 (1). (1) have cytostatic, antiatriosclerotic, PMMM-1). (1) have cytostatic, antiatriosclerotic, anticonvulsant, nootropic, neuroprotective, cerebroprotective, anti-HIV, antiallergic, antiinflammatory and thyromimetic activities, and can be useful in diagnosing, The PMM polypeptides and polymuclectides are useful in diagnosing, treating appression or overexpression of PMMM, such as sociated with the decreased expression or overexpression of PMMM, such as cell proliferative (e.g. cancer, atherosclerosis), neurological (e.g. as cell proliferative (e.g. tarcke), immune/inflammatory (e.g. AIDS, allergies) and developmental (e.g. hypothyroidism, Cushing's syndrome) callergies) and developmental (e.g. hypothyroidism, Cushing's syndrome) disoase, stroke), immune/inflammatory (e.g. AIDS, allergies) and developmental (e.g. hypothyroidism, Cushing's syndrome) canders, or infections. They are also useful in screening cargumences of PMMM. The PMMMS or their fragments are useful in screening compounds to the farget polymucleotide and compounds or in altering the expression of the target polymucleotide and compounds the most in an expression of the target polymucleotide and compounds the most or modulate the activity of the polypoptide. The microarray is useful in monitoring or measuring protein-protein
                                                                                                                                                                       Human; protein modification and maintenance molecule; PMMM; cytostatic; antiarteriosclerotic; anticonvulsant; nootropic; neuroprotective; AIDS; cerebroprotective; anti-HIV; antiallergic; antiinflammatory; cancer; thyromimetic; gene therapy; cell proliferative disorder; atherosclerosis; neurological disorder; epilepsy; Huntington's disease; stroke; allergy; immune disorder; inflammatory disorder; developmental disorder; hypothyroidism; Cushing's syndrome; infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New human protein modification and maintenance molecules (PMMM), useful for diagnosing, treating and preventing diseases or conditions associated with the aberrant PMMM expression e.g. cancer, AIDS, epilepsy, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sprague WW, Chawla NK, Warren BA, Tang YT, Elliott VS; Maraquis DY, Li JX, Griffin JA, Gietzen KJ, Yang J, Lu DAM; Emerling BM, Duggan BM, Richardson TW, Lee SY, Rankumar J, Becha SD; Lehr-Mason PM, Swarnakar A, Tran UK, Kable AE, Hafalia AJA, Khare R;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; Page 213-214; 270pp; English.
ABR43245 standard; protein; 248 AA.
                                                                                                                               Human PMMM-6 protein SEQ ID NO:6.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           05-OCT-2001; 2001US-0327233P.

The present sequence represents a Monkey antibody light chain linked to a theavy chain. The antibody binds to a target structure displayed in and on the cell surface of human gastrointestinal epithelial tumour cells and in a subpopulation of normal human gastrointestinal epithelial cells. The target structure especially comprises alphaébeta4 integrin. This is a tumour-associated antigen. The antibody, and its framents, are useful for treating conditions based on anti-angiogenic mechanism in humans. They are useful for treating human metastatic and malignant disease, for in vitro, in vivo diagnosis and prognosis of human malignant disease, comprising tumour typing, tumour screening, tumour diagnosis and monitoring premallignant conditions. Quantitative in vivo diagnosis is carried out by determining the localization of antibody to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention describes an isolated G protein coupled receptor X (GPCRI-
12) polypeptide, especially an olfactory receptor. GPCRX polypeptides are
12) useful for identifying an agent that binds to the polypeptide and for
13 identifying a candidate substance or ligand molecules interacting with an
14 confectory receptor polypeptide. The polypeptide, (I) and (II) are also
15 considered and diseases and disorders related to cell signal
16 corriconeurogenic diseases, and developmental diseases, immune
17 corriconeurogenic disease, signal transduction pathway disorders,
18 corriconeurogenic disease, pain, cancer, Parkinson's disease, acute
18 corriconeurogenic disease, pain, cancer, Parkinson's disease, acute
18 corriconeurogenic disease, pain, cancer, Parkinson's disease, ulcers,
18 consist, infectious disease, pain, cancer, Parkinson's disease, ulcers,
19 consist, infectious disease, pain, cancer, Parkinson's disease, ulcers,
20 consistent and lisorders, genetic disorders, transplantation,
21 callary, mencrological disorders, genetic disorders, transplantation,
22 certility, Panorealitis, Hyperthyroidism and Endometriosis GPCRX
23 consistent and stissues e.g. hair or skin or body fluids in forensic
23 chiology. Cells comprising (I) are useful for producing non-human
23 chiology. Cells comprising (I) are useful for producing non-human
24 cransplantaling and/or evaluating modulators of GPCRX protein
25 creceptor described in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

This invention describes novel polynucleotides isolated from Ashbya gossypii (also known as Eremothecium gossypii), that encode a protein associated with construction of the cell wall and/or cytoskeleton. Modulating the construction of the cell wall/cytoskeleton, especially such that the cells are stabilised, improves microbial production of Vitamin B2, a human and animal food supplement. This sequence represents a fragment of Oligo 103 which encodes an A. gossypii cell wall/cytoskeleton associated protein.Oligo 103 encodes a homologue of a Saccharomyces cerevisiae actin overexpression associated protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New polynucleotide from Ashbya gossypii, useful for increasing microbial production of Vitamin B2, encodes protein involved in construction of cell wall and cytoskeleton.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Metalloprotease; 65649; astacin; proteolytic; gene therapy; apoptosis; metaetasis; wound healing; endometrial cycling; tumour cell invasion; bone remodelling; neurological; cardiovascular; endothelial; cytostatic; immune; bone metabolism; neuroprotective; nootropic; immunosuppressive;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to novel human nucleic acid molecules that encode a metalloprotease family member designated the 65649 protein. The 65649 cativate growth factors, degrade polypeptides and process extracellular proteins. Typically requiring zinc for catalysis, this enzyme can be used for drug screening, chromosome mapping, tissue typing and in forensic chology. Furthermore, gene therapy using the 65649 molecules may be used to modulate tumour cell invasion, metastasis, tissue or organ integrity, owund healing, endometrial revoling, hair follicle cycling, bone remodelling, ovulation, embryonic development, and apoptosis. These may further be used to control or prevent e.g. cellular proliferative and/or differentiative disorders, as well as neurological, cardiovascular, endochelial and immune disorders, and bone metabolism disorders.

Compositions of 65649 can therefore be described as cytostatic, reuropsrotective, nootropic and immunosuppressive. The nucleic acids, proteins, and antibodies of the invention are useful in screening assays, proteins, and antibodies of the invention are useful in screening assays, proteins medicine, and in therapeutic and prophylactic treatment. This polypeptide sequence is the human 65649 metalloprotease of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                    New human metalloprotease, 65649, polypeptides and polynucleotides, useful for modulating e.g. tumor cell invasion or metastasis, tissue or organ integrity, wound healing, endometrial cycling, hair follicle cycling, or ovulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

This invention describes novel polynucleotides isolated from Ashbya gossypii (also known as Eremothecium gossypii), that encode a protein associated with construction of the cell wall and/or cytoskeleton. Modulating the construction of the cell wall/cytoskeleton, especially such that the cells are stabilised, improves microbial production of Vitamin B2, a human and animal food supplement. This sequence represents an A. gossypii cell wall/cytoskeleton associated protein encoded by Oligo overexpression associated protein.
                                                                                                                                                                                                                                                                                                                                                                                                                   New polynucleotide from Ashbya gossypii, useful for increasing microbial production of Vitamin B2, encodes protein involved in construction of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human, protease peptide, structural protein, extracellular reticulum, transgenic, gene therapy, enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
   장. 쉽
                                                                    The invention relates to an isolated human protease peptide. The peptide cleaves structural proteins in the extracellular reticulum. The encoding nucleic acids are useful as primers and probes e.g. in detection assays and in the polymerase chain reaction, genotyping, antisense therapy, and gene therapy. They are also used in recombinant vectors. expressing the protease peptide, and constructing recombinant cells and animals. Vectors comprising the nucleic acids are used to transform a host cell which can generate a transgenic animal. The protease peptide, antibodies and human protease protein. The present sequence represents the human protease protein. The present sequence represents the human protease potein.
                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    20. 30
/note= "Prokaryotic membrane lipoprotein lipid attachment
An isolated human protease peptide, for identifying modulators of its function to treat diseases and conditions mediated by protease activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; secreted protein; therapeutic; drug screening; immune response; pharmacogenomic analysis; tissue typing; gene therapy.

Sequences of the invention are useful as models for the development of human therapeutic compositions, aid in the identification of therapeutic agents. The peptides may be used in the development of human therapeutic agents. The peptides may be used in drug. screening assays, in assays to determine the biological activity of the protein, as markers for tissues in which the corresponding protein is preferentially expressed, to raise antibodies or to elicit another immune tesponse and to quantitatively determine the levels of the protein in biological fluids. The secreted peptides are also useful for diagnosing a disease, predisposition to a disease or treating a disorder characterised by an absence of, inappropriate or unwanted expression of the protein. The antibodies are useful in pharmacogenomic analysis, for inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ಹ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the invention are

The present sequence is human G-protein coupled receptor-11 (GPCR-11) protein. GPCR protein and DNA may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate GPCRX expression, obesity, diabetes mellitus, anorexia, cachexia, cardiomyopathy, pain, atherosclerosis, neurodegenerative disorders (Alzheimer's disease, Parkinson's disease, Huntington's disease); bullimia, immune disorder, haematopoietic disorders, disorders related to cell signal processing and metabolic pathway modulation, retinal disorder (photoreception), bacterial, fungal, protozoal and viral infections (HIV); cancer (neoplasm adenocarcinoma); angina pectoris, hypotension, hypertension, asthma, Crohn's disease, multiple sclerosis, ulcers, neurological disorders (dementia, mental retardation, schizophrenia, anxiety); acute heart failure, osteoporosis, myocardial infarction and urinary retention
                                                                                                                             Human; G-protein coupled receptor 11; GPCR11; cardiomyopathy; vaccine; atherosclerosis; diabetes; cardiant; cytostatic; cancer; obesity; pain; diabetes mellitus; anorexia; cachexia; cardiomyopathy; atherosclerosis; neurodegenerative disorder; Alzheimer's disease; Parkinson's disease; immune disorder; haematopoietic disorders; retinal disorder; HIV; human immunodeficiency virus; adenocarcinoma; bulimia; asthma; ulcer; angina pectoris; hypotension; hypertension; Crohn's disease; anxiety; multiple sclerosis; schizophrenia; dementia; mental retardation; gene therapy; osteoporosis; urinary retention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              G-Protein coupled receptor polypeptides and NAs useful for preventing, diagnosing and treating cardiomyopathy, atherosclerosis, cancers and diabetes.
                                                                                            Human G-protein coupled receptor 11 (GPCR11) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Padigaru M, Mishra V, Spytek KA,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is an olfactory receptor which is encoded by one of a number of novel polynucleotides. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable of edetermination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining differences in the olfactory faculties of different

The present sequence is human G-protein coupled receptor-12 (GPCR-12) protein. GPCR protein and DNA may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate GPCRA expression, obesity, diabetes mellitus, anorexia, cachexia, cardiomyopathy, pain, atherosclerosis, neurodegenerative disorders (Alzheimer's disease, Parkinson's disease, Huntington's disease); bulimia, immune disorder, haematopoietic disorders, disorders related to cell signal processing and metabolic pathway modulation, retinal disorder (photoreception), bacterial, fungal, protozoal and viral infections (HIV); cancer (neoplasm adenocarcinoma); angina pectoris, hypotension, hypetrension, asthma, Crohn's disease, multiple sclerosis, ulcers, neurological disorders (dementia, mental retardation, schizophrenia, anxiety); acute heart failure, osteoporosis, myocardial infarction and urinary retention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                 G-Protein coupled receptor polypeptides and NAs useful for preventing, diagnosing and treating cardiomyopathy, atherosclerosis, cancers and diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human, olfactory receptor; OR; primary scent determination; secondary scent determination; polypeptide library; odour receptor; scent profile; scent fingerprint; scent representation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polynucleotides which encode polypeptides involved in olfactory

```
The present sequence is an olfactory receptor which is encoded by one of a number of novel polynucleotides. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polynucleotides which encode polypeptides involved in olfactory sensation for identifying olfactory agonists and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 11; Page 970-971; 1857pp; English.

                                                                                                                               The present sequence is an olfactory receptor which is encoded by one of a number of novel polynucleotides. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining differences in the olfactory faculties of different
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; olfactory receptor; OR; primary scent determination; secondary scent determination; polypeptide library; odour receptor; scent profile; scent fingerprint; scent representation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;

This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining differences in the olfactory faculties of different
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; G-protein coupled receptor-4; GCREC 4; cytostatic; hepatotropic; virucide; antiinflammatory; anticonvulsant; antiemetic; neuroprotective; notropoic; cerebroprocective; hypotenaive; tranquilliser; vulnerary; ophthalmological; cell proliferative disorder; actinic keratosis; anorectic; arteriosclerosis; atherosclerosis; cirrhosis; hepatitis; psoriasis; cancer; neurological disorder; stroke; Alzhamer's disease; Huntington's disease; Parkinson's disease; cardiovascular disorder; epilepsy; hypertension; varioses vein; vasculitis; dysphagia; dyspesia; anorexia; gastrointestinal disorder; pancreatitis; autoimmune disorder; Addison's disease; crown's disease; acquired immune deficiency syndrome; AlDS; uveitis; infection; transgenic animal; gene therapy.

The present sequence is human G-protein coupled receptor-4 (GCREC-4)

protein. The present invention relates to GCREC protein and nucleic acids

cc encoding them. GCREC protein, its agonist or antagonist are useful for

treating diseases or conditions associated with decreased expression or

cc reating diseases or conditions associated with decreased expression or

cc encerpression of functional GCREC in a patient, where the disorder is

selected from cell proliferative disorders such as actinic keratosis,

arteriosclerosis, atherosclerosis, cirhosis, hepatitis, psoriasis, and

cancer, neurological disorders such as epilepsy, stroke, Alzheimer's

cd disease, Huntington's disease, Parkinson's disease, cardiovascular

cd disorders such as dysphagia, dyspepsia, anorexia, nausea,

cd disorders such as dysphagia, dyspepsia, anorexia, nausea,

contential disorders such as dysphagia, dyspepsia, anorexia, nausea,

contential, bacterial, fungal, parasitic, protocoal, helminthic

cuvetitis, viral, bacterial, fungal, parasitic, protocoal, helminthic

contentions, trauma and metabolic disorders such as diabetes, obesity,

contential and their consense of GCREC sequences

ö
useful for screening for compounds involved in olfactory sensation, where the compounds can be used in the food, pharmaceutical and cosmetic industries to customize odors.
                                                                                                                          The invention relates to nucleic acids encoding human olfactory receptors, OR, (a G protein-coupled receptor, GPCR). The OR's specifically recognise molecules, odourants, that elicit specific olfactory sensation. The human olfactory receptors and polynucleotides encoding them are useful for screening a library of chemical compounds for compounds that are involved in olfactory sensation. Modulators of their activity are useful for pharmacological and genetic modulation of olfactory signalling pathways. Therefore, they can be used in the food, pharmaceutical and cosmetic industries to customise odours and fragrances. The present sequence is a human olfactory receptor of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                 TYPE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             a
Patent No. 6562958

GENERAL INFORMATION:

PAPLICANT: Gary L. Breton et al.

TITLE OF INVENTION: MUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER

TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/328,352

CURRENT APPLICATION NUMBER: US/09/328,352

CURRENT FILING DATE: 1999-06-04

NUMBER OF SEQ ID NOS: 8252

SEQ ID NOS: 9258

LENGTH: 201
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 4307, Application US/09328352

Sequence 4307, Se62958

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 85, Application US/09886055

Parent No. US20020132273A1

GENERAL INFORMATION:

APPLICANT: STRYER, LUBERT

APPLICANT: STRYER, LUBERT

APPLICANT: STRYER, LUBERT

TITLE OF INVENTION: RECEPTOR FINGERPRINTING, SENSORY PERCEPTION, AND

TITLE OF INVENTION: BIOSENSORS OF CHEMICAL SENSANTS

FILE REFERENCE: 078003-0277150

CURRENT APPLICATION NUMBER: US/09/886,055

CURRENT PILING DATE: 2001-06-22

RIOR APPLICATION NUMBER: 60/213,812

PRIOR FILING DATE: 2000-06-22

NUMBER 09 SEQ ID NOS: 522

SOFTWARE: PARENT NOS: 522

Patent No. US2002013227341

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: STRYER, LUBERT

APPLICANT: SOZULYA, SERGEY

TITLE OF INVENTION: BECEEPPOR FINGERPRINTING, SENSORY PERCEPTION, AND

TITLE OF INVENTION: BIOSENSORS OF CHEMICAL SENSANTS

FILE REFERENCE: 078003-0277150

CURRENT APPLICATION NUMBER: US/09/886,055

CURRENT APPLICATION NUMBER: 60/213,812

PRIOR APPLICATION NUMBER: 60/213,812

PRIOR FILING DATE: 2000-06-22

NUMBER OF SEQ ID NOS: 522

SOGTWARE: Patentin Ver. 2.1

SEQ ID NO 89

LENGTH: 314

TYPE: PRT

CRANISM: Homo sapiens

This antibody is directed against a human factor VIII inhibitory antibody directed towards the C2 domain of Factor VIII. The anti-idiotypic antibody is characterized by having the capacity to neutralize by at least 50% the inhibition of FVIII procoagulant activity mediated by inhibitory antibodies against the C2 domain of FVIII. The anti-idiotypic antibodies of the invention may be used to treat, prevent or reduce bleeding disorders of haemophilia patients, or to induce apoptosis of B cells carrying anti-C2 inhibitory antibodies in a haemophilia patient.

This protein is a metalloprotease, specifically a choriolysin/astacin-like metalloprotease. The INSPOS polypepides and mucleic acid molecules of the invention are useful in the therapy or diagnosis of diseases or in the manufacture of a medicament for the treatment of a disease, such as a respiratory disorder, including emphysema and cystic fibrosis, a metabolic disorder, a cardiovascular disorder, a bacterial infection, hypertension, a proliferative disorder, including cancer, an autoimmune/inflammatory disorder, including rheumatoid arthritis, a neurological disorder, a developmental disorder, a reproductive disorder or other pathological condition in which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               neurological disorder; developmental disorder; reproductive disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          metalloprotease proteins (INSPOO5a or INSPOO5b) for diagnosing,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents a fragment of a new secreted polypeptide,

This protein is a metalloprotease, specifically a choriolysin/astacin-like metalloprotease. The INSP005 polypeptides and nucleic acid molecules of the invention are useful in the therapy or diagnosis of diseases or in the manufacture of a medicament for the treatment of a disease, such as a respiratory disorder, including emphysema and cystic fibrosis, a metabolic disorder, a cardiovascular disorder, a bacterial infection, hypertension, a proliferative disorder, including cancer, an autoimmune/inflammatory disorder, including rheumatoid arthritis, a neurological disorder, a developmental disorder, a reproductive disorder or other pathological condition in which

Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and disorders related to organ transplantation

Claim 10; Page 1545; 2508pp; English.

designated ORF (open reading frame) 1-4534, and sequences ABN75054ABN79587 represent CDNAs encoding them. The invention also encompasses polypeptides at least 80% identical to the ORFT-ORF4534 (collectively referred to as ORFX) proteins, polymcleotides at least 85% identical to the ORFX nucleic acid sequences, vectors and host cells comprising ORFX polymcleotides, the recombinant production of ORFX proteins, antibodies specific for ORFX proteins, methods of detecting ORFX proteins, antibodies operatively, and methods of screening individuals for a predisposition to an ORFX-associated disorder. The ORFX proteins of the invention have a wide range of biological activities, such as cytokine, cell proliferation, tissue growth angiogenesis, activity, haematopoicals regulation, tissue growth angiogenesis, activity, thrombolytic activity, chemotactic/ chemokinetic activity, and may also be involved in the determination of bodily characteristics, fertility and behaviour. ORFX proteins, or the order and antiinfective activity, and may also be involved in the determination of bodily characteristics, fertility and behaviour. ORFX proteins, or the order and antibodies may be used in the treatment of cancers, ester other proliferative disorders such as psoriagis and benign tumours, neurological disorders such as epilepsy and Alzheimer's disease, cardiovascular diseases, immune system disorders, disorders related to organ transplantation, disorders of tissue growth and regeneration, diseases such as diabetes mellitus, hypothyroidism, and cholesterol ester storage disease, and infectious diseases caused by viral, bacterial, fungal and other pathogens. OREX mulciel cacids may also be used as a source of primers and probes, in the detection of OREX genomic sequences or transcripts, in the identification and cloning of homologous sequences, in genetic diagnosis, and in forensic biology. The OREX nucleic acids may additionally be used to produce transgenic animals Sequences ABP31028-ABP35561 represent 4534 novel human proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of
                                                                                                                                                                                                                                                                                                                Human brain expressed single exon probe encoded protein SEQ ID NO: 29307.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Single exon nucleic acid probes for analyzing gene expression in human
